

The area outside of each bedroom should have a smoke detector.

- Smoke detectors are powered either by battery, household electrical wiring, or wiring with battery backup.
- Smoke detectors in dwelling units built after December 31, 1980, receive the primary power source from the household electrical wiring.
- Each sleeping area has at least one smoke detector.
- Sleeping areas that are separate should have at least one smoke detector per area.
- The smoke detector battery is operational and the smoke detector is clean.
