ACTION TAKEN

NOTES :

Memo

To: Mayor, City Council, and City Supervisor
From: William F. Mulholland, Finance Director 
Date: May 12, 2010
Re: 2009 Preliminary Year-End Financial Report

The attached calculations of the Year-End Financial Report are preliminary. There is a possibility that adjustments will be made to the estimates during the preparation of the 2009 Financial Statements and subsequent audit. The Finance Department feels that any changes will be minor in nature, so we are comfortable in presenting the information at this time.

The preliminary estimate for General Fund revenues collected is \$14,575,367 or 98.1 percent of the 2009 revenue budget and 99.4 percent of the 2010 preliminary budget estimate for 2009. When comparing the 2009 revenue collections with 2008 revenue collections, the categories that experienced the most significant change are property taxes, sales taxes, licensing and permits, and investment income.

- 2009 property tax collections grew \$150,842 or 4.4 percent compared to 2008. The increase is due to \$35.6M of assessed value being added to the property tax rolls and exercising the 1.0 percent revenue limit increase.
- 2009 sales tax activity was expected to decrease approximately 13.2 percent from 2008 due to reductions in construction activities but experienced sharper decreases amounting to 15.6 percent from 2008 levels. Sales tax from construction remained weak, as we did not have the WSU projects as we had in previous years as well as strong construction activity elsewhere in Pullman.
- Licensing and Permit revenues increased 19.9 percent or \$38,678 due to receiving the permit fees for Wal-Mart in December. Without Wal-Mart, we would have had a decrease in building permit activity of 29.3 percent. Without Wal-Mart the building permit fees would have decreased \$57,022 because permit issuance valuations would have decreased \$2.7M. In 2009, without Wal-Mart, permits valued at \$16.4M were issued while permits valued at

\$64.3M were issued in 2005, \$61.1M in 2006, \$52.8M in 2007 and 19.0 M in 2008.

- Investment income decreased \$231,765 or 75.3 percent. Fast decreasing interest rates are the reason for the decrease. The City primarily uses the Washington State Local Government Investment Pool (LGIP) and bank overnight sweep accounts for investment earnings. In 2007 the LGIP's average earnings rate was 5.0897 percent. In 2008 the earnings rate averaged 2.6814 percent. The rate dropped to a four-year low of 0.3327 percent in December 2009. The rate at the end of January 2010 was 0.3347 percent.

The 2009 General Fund expenditure projections were better than projected. The preliminary 2009 General Fund expenditures total \$15,045,742 or 94.4 percent of the expenditure budget and 96.7 percent of the 2010 estimate of 2009 expenditures. The departments did a great job controlling costs to help address the city's budget challenges. In terms of dollars, the General Fund departments with the most significant increases from 2008 to 2009 are Police, Ambulance, and Parks and Recreation. In terms of percentage, the General Fund departments with the most significant increases from 2008 to 2009 are Legislative, Cemetery and Weed Control. Finance, General Government, Fire Services, Bldg Inspection, Commu/Dispatch and Library were the departments showing decreases from 2008 to 2009.

All city departments are experiencing increases to the cost of labor. General Fund salaries increased \$205,663 or 2.7 percent in 2009 compared to 2008. During the same period the cost of benefits increased \$155,462 or 5.3 percent. Of the \$153,462 total General Fund expense increase in 2009, \$361,125 was due to the increasing cost of labor and was offset with reductions in all other categories. The decrease in General Government is a result of decreasing insurance costs due to improving experience ratings and fewer transfers for one-time capital expenditures.

The 2009 original budget projected that the fund balance would be used to balance the deficit of revenues compared with expenditures. The preliminary year-end numbers still show a deficit, but much lower than projected. The preliminary year-end figures show that expenditures exceeded revenues by \$470,375. The original 2009 budget projected that \$924,985 of fund balance would be used to balance the budget. This is very welcome news since the 2010 Adopted Budget failed to attain the Council goal of maintaining a 13-percent reserve. The 2010 Budget was approved, projecting an ending cash balance of \$1,732,870. This is equal to 11.38 percent after accounting for miscellaneous reserves. Bear in mind that the 2010 Budget does not include COLAs for five out of six labor groups or the non-represented employees. Now the estimated 2010 beginning cash balance is \$2,963,191 or 19.5 percent of the 2010 operating budget. The 2010 Budget estimated a beginning cash balance of \$2,565,571. The 2010 projected ending cash is \$2,216,708 or 14.6 percent reserve and a cushion of \$135K above the required reserve amount. As reported at the April 27th council meeting, budget amendments will add \$163K to projected costs. This will result in a shortfall of \$27.6K or a 12.6 percent reserve.

The 2010 Budget was adopted without addressing two key issues. The 13-percent reserve level was not preserved and salary adjustments for the aforementioned unsettled labor contracts are not included. Another issue that is not addressed is the potential worsening local economy. If the labor contracts are settled under terms similar to the settled uniformed police contract, the additional 2010 costs could be between \$100,000 and \$125,000.

It is my recommendation that any year-end savings that remain after addressing the reserve balance be saved to address further challenges to the 2010 Budget such as the unsettled labor contracts and a local economic downturn.

The same challenges the city has faced with recent budgets will continue to challenge future budgets. These include the property tax 1.0 percent revenue limit and large health insurance premium increases. As forewarned, the most serious 2010 challenge is coming from the area that has been the source of good news the last five years. The City of Pullman has been able to address increasing expenses, because strong construction levels have increased property, sales, and utility taxes faster than the rate of inflation. It is projected that the 2010 sales tax collections will be flat or a little under 2009 collections. These projections may be improved based on the impact of Wal-Mart sales tax dollars and if other construction projects move forward this year.

General Fund Summary

It is my recommendation that the city continue to move forward with the 2010 General Fund budget year with extreme caution in anticipation of labor contract settlements and a worsening local economy.

The City of Pullman sales tax base did not show signs of slowing when the City Council adopted the 2010 Budget. In addition, sales tax information is distributed two months after the sales takes place, so the information available at the time of budget adoption did not reflect the continued economic downturn that began in October 2008. We now have sales tax data through December 2009. The October – December 2009 sales taxes were lower than the October-December 2008 sales taxes and the five-year average. Sales tax collections showed significant decreases to certain top ten sales tax categories for 2009. The most notable decreases include:

- The motor vehicle and parts dealer category was down 4.7 percent comparing 2008.
- The miscellaneous Store Retailers stores category was down 15.3 percent comparing 2008.
- The largest sales tax category, construction of buildings, decreased 70.0 percent comparing 2008.

Overall sales taxes are weak and will remain so through the first half of the year.

Staff continues to advise that it is not time to panic. Pullman is definitely experiencing an economic slowdown, but at this time it is not of the same magnitude that the State and many other jurisdictions are facing.

State of Washington economic challenges have been well publicized. Those challenges will directly impact two of Pullman's major employers, Washington State University and the Pullman School District #267. Budget reductions to WSU will impact the City of Pullman when the first employment cuts take effect in May 2010.

The biggest expenditure challenges the city faces will continue to be the cost of labor. Forecasts continue to show large increases in medical insurance premiums. It is possible that medical insurance premiums could increase significantly in 2011 as 2010 increases were not as high as expected.

In addition, it is important to remember that the 2010 General Fund Budget was balanced with a \$751,606 drawdown of reserves. This means that expenditures are expected to exceed revenues by \$751,606. No matter the size of the deficit, the deficit will need to be addressed when excess cash is depleted.

It is hoped that the deficit will not be \$751,606. The budget has been developed with a conservative approach, so the deficit represents a worse case scenario. Also the good stewardship of our department heads and employees has been instrumental in keeping our budget manageable. The reserve level might have been depleted by now if it weren't for those efforts.

Other Major Funds

The 2009 expenditures for the other major funds (Arterial Street, Street, Utility, and Transit) in total were less than the amended budgets by 5.67 percent. The funds expended 28.5 percent to 109.4 percent of the amended budgets.

The other major fund revenues were within an acceptable range of the budget except for the Arterial Street Fund. The range of revenues received versus budget was 37.2 percent to 107.6 percent. The Arterial Street Fund received only 37.2 percent of the budgeted revenues, but the large majority of the fund revenues are grants, which are highly dependent upon the timing of project completions. Expenditures for the Arterial Street Fund were 28.5 percent of the budgeted expenses.

The projected 2010 year-end fund balances for other major funds are considered healthy. The 2010 Transit Fund year-end fund balance projection is \$182,148 or 5.8 percent of the operating budget. The fund balance is to be reduced by approximately \$485K for our portion of the 5 new buses. Without this purchase, the fund balance would be 21.2 percent. The other major funds are projecting ending cash balances as a percentage of the operating budgets higher than the 13.0-percent goal for the General Fund. The higher reserves are justified because of the respective capital

improvement programs and the potential impact from emergency repairs of infrastructure.

Memo

To: Mayor, City Council, City Supervisor, and Department Heads

From: William Mulholland, Finance Director 

CC: Finance Staff

Date: May 12, 2010

Re: 2010 First Quarter Financial Summary

At the April 27th Council meeting, I presented a preliminary 2010 first quarter financial summaries and comparisons to the 2010 Budget and last year's data. There has been no change to the Revenues or Expenditures that were presented at that time. I have attached the original document to this memo.

We have received notification from Washington State University that they are proceeding on the WSU Recreational Playfields Improvements, a \$6,460,100 project that will be completed by the end of the year. WSU also contracted for the Carver Farm Parking Lot, a \$444,500 project. These projects should generate in excess of \$58,000 in sales tax revenue.

We also received the latest update from the Washington State Economic and Revenue Forecast Council which is attached.

Memo

To: Mayor, City Council, City Supervisor, and Department Heads

CC: Finance Staff

Date: April 20, 2010

Re: 2010 First Quarter Preliminary Financial Summary

The 2010 first quarter financial summaries and comparisons to the 2010 Budget and last year's data will be presented at the May 18, 2010 Council meeting. This summary will focus on the General Fund and preliminary financial results for the 1st quarter as illustrated in Attachment 1.

GENERAL FUND EXPENDITURES

As of March 31, 2010, total General Fund Expenditures were \$3,251,689 or 21.11 percent of the 2010 Budget. This is a total increase of \$99,770 from the March 31, 2009, total. Expenditures at March 31, 2009, were 20.26 percent of the total 2009 General Fund Budget. There are of course differences in expenditure rates among divisions and departments. Expenditure rates differ within the various divisions. Also when reoccurring expenditures are paid can affect these percentages. These differences will be looked at the May 18th meeting.

The 1st budget amendment will be presented before long, and will include \$125,000 for LEOFF 1 Fire payments and \$28,000 for the library, which were originally left off of the 2010 budget. With these amounts added to the budget, expenditures to date would equal 20.9 percent of the budget

GENERAL FUND REVENUES

As of March 31, 2010, total General Fund Revenues are \$2,207,341 or 15.1 percent of budget. Last year at this same time, revenues were 15.7 percent of budget. As of March 31, we saw a decrease in revenues totaling \$90,958 from last year to this year. The main differences are decreases to sales tax and the Electric/Gas utility tax.

Sales tax collections decreased \$108,548 during the first quarter of 2010 as compared with the first quarter of 2009. As expected, the decrease comes from a construction-related sales tax categories slowdown as well as the general economic climate. The construction of buildings category is down 71.6 percent or \$97,485 through the first quarter of 2010. The 2010 General Fund Budget included a sales tax projection of a slight increase over 2009's actual collections. Construction permit valuations are ahead of last year, and the construction related tax collections should start picking up. However, with the budget cuts at WSU and staff reductions it is too early to tell what effect this will have on further residential construction for the year. Although Wal-mart was not figured into tax projections, we will not start receiving construction revenue in April. Obviously, staff will be closely monitoring tax collections throughout the year.

Revenues from the Electric/Gas utility tax is down \$49,324 or 17.4 percent for the 3 month period. The majority of the decrease is due to a rate decrease for gas prices by Avista, and of course our relatively mild winter as compared to the two previous ones. Whereas, the mild winter was great for all involved, it did mean a lowered demand and use of gas and electric. Avista is looking at another rate hike, and if the summer is warmer than normal, we should recoup some of these taxes back latter in the year.

CONCLUSION

At this early stage in the year, both revenues and expenditures are in the position that is not unexpected. The 2010 Budget was adopted without consideration for unsettled labor contracts and no COLAs for unrepresented employees. Sometime in April we will receive part of our first installment on 2010 property taxes. Dependent on the payments received, we could either exceed or be behind last year's amounts at the end of April. This as well as payment s that go out are functions of timing considerations, of which we are not always in control. This simple fact needs to be understood, since not recognizing this reality could result in wrong conclusions. Between revenues and expenses we are behind \$190,728 from last year. Though this is not where I would like to be at this time, these timing issues have a tendency to distort results. We still have a tough year ahead of us, and constant vigilance on our results is a must to insure that if unexpected results or circumstances do occur that we can react in a timely fashion to mitigate the results.

ECONOMIC & REVENUE UPDATE

11 May 2010

U.S.

- The economic recovery appears to be gathering momentum, although the financial sector where the meltdown began remains jittery. First quarter GDP results show continued growth in economic activity for a third consecutive quarter. More importantly, private spending, both by consumers and businesses, is firming up, reducing the risk of a "double-dip" slide into another recession. Jobs that typically lag the recovery are also finally starting to grow again. The national economy has seen net job growth in 5 of the last 6 months. Both manufacturing and services have now returned to solid growth. Only the construction sector, especially commercial real estate is lagging.
- Real GDP grew at a 3.2% seasonally adjusted annualized rate (SAAR) in the first quarter of 2010. Real consumer spending was up 3.6% (SAAR), contributing 2.6 percentage points of the total 3.2 percent growth. Business spending on equipment and software was up 13.4% (SAAR) – its second consecutive quarter of robust double-digit growth. In April, the ISM's Purchasing Manager's Index for manufacturing rose to 60.4 while the non-manufacturing index was unchanged at 55.4 – signaling robust growth in both sectors. A reading above 50 implies growth.
- The April jobs report was encouraging, showing that the economy created 290,000 net new jobs in that month. This is the highest gain since the recession began. The prior months' numbers were also revised up for an additional gain of 121,000 net jobs. Job gains in April were widespread across sectors – manufacturing (44,000); construction (14,000); and private service producing (166,000) which included 45,000 jobs in leisure and hospitality, 80,000 jobs in professional and business services and

The S&P 500 VIX volatility index has spiked recently

12,400 jobs in retail trade. Temporary census workers accounted for just 66,000 new jobs. The manufacturing workweek for all employees increased by 0.2 hours for the second straight month to 40.1 hours, and factory overtime was up by 0.1 hours during the month. Average hourly earnings of employees in the private nonfarm sector increased by 1 cent to \$22.47, bringing the 12-month increase to 1.6%.

- Financial markets remain jittery, indicating the still fragile nature of this recovery. The nervousness in U.S. equity markets as measured by the S&P 500 VIX or volatility index spiked on fears of a "Greek default" ([see figure](#)). Consequently, a "flight to safety" has caused the USD to strengthen against the EUR. Fortunately, this appreciation in the USD as explained in the next section will not have a major impact on Washington exports. As we go to press, a EUR 750 billion rescue package appears to have calmed market fears of contagion from a potential default on sovereign bonds by Greece to other vulnerable countries in Europe - Spain, Portugal and Ireland. Its long-term impact remains to be evaluated.

ECONOMIC & REVENUE UPDATE

WASHINGTON

- Economic data released since the February 2010 forecast release continue to support the view that the state's economy has turned the corner and is expanding at a moderate rate. As expected in the February forecast, employment increased 6,600 during the first three months of 2010. Washington housing permits continued to grow in the first quarter of 2010, exceeding the February forecast by about 12%. Consumer spending appears to be coming back and the outlook for manufacturing remains positive. However, construction employment continues to decline.
- We have three months of new job data since the last forecast. Washington payroll employment surged in January, retrenched in February, and rose modestly in March. Employment growth for the three months as a whole was 6,600, exactly as expected in the February forecast. The private sector added 7,300 during the first quarter of 2010, more than twice the 3,000 expected in the forecast. The strength in private job growth was largely in the trade, transportation, and utilities sector. Government employment declined 700 from December to March. We had expected an increase of 3,700 jobs. The variance was mostly in federal government employment as there were not as many temporary 2010 census workers hired as we had anticipated. The reduction in state and local government employment was also greater than expected in the forecast. The unemployment rate edged up during the first quarter, but this was not a surprise. The unemployment rate typically lags payroll jobs. We believe the state's unemployment rate will peak in the current quarter.
- We remain comfortable with our February forecast. Employment during 2010 will be affected by the hiring of temporary Census workers, which will add thousands of new jobs through May and then subtract thousands through the rest of the year. Excluding the temporary Census jobs, employment growth will rise to over 2% in the second half of 2010, and then to over 3% during 2011.
- The recovery in housing permits in the first quarter also exceeded our expectation. Housing permits came in at 23,900, 20,200, and 19,300 (SAAR) in January, February, and March. The declining trend was due entirely to the volatile multi-family segment that jumped to 7,400 in January and then declined to 3,300 and 1,500 in February and March. The January spike in multi-family housing was clearly unsustainable in the current environment of high vacancy rates and difficult credit conditions. The average number of multi-family units in the first quarter came in at 4,100 units (SAAR), surpassing our forecast of 2,900. We expect multi-family permits to remain very low through the remainder of this year. The single-family segment of the market is showing sustained, albeit modest, growth. Single-family permits declined slightly in January to 16,400 from 16,800 in December but then rose to 16,800 in February and 17,800 in March. March's single-family permits were the highest since May 2008. Much of the recent improvement in single-family activity was likely the result of government incentives. The upcoming expiration of these programs is a threat to the housing recovery. In the longer term, we are optimistic about housing construction. We expect an upturn in population growth, which has been depressed by the recession and housing crisis, and an improving economy will lead to a rise in household formation. Housing construction will not return to the levels reached in the bubble years.
- Despite the turnaround in housing permits, construction employment continues to decline. Employment in residential building and related special trades will begin rising in the second half of 2010. However nonresidential construction employment will continue to

ECONOMIC & REVENUE UPDATE

WASHINGTON...continued

decline well into 2011. We expect overall construction employment to bottom out in the third quarter of this year. Because of the continued drag from nonresidential construction, though, we expect little growth in overall construction employment until the second half of 2011. In spite of a fairly strong recovery in 2012 and 2013, construction employment will still be 36,000 below the previous peak at the end of 2013.

The outlook for manufacturing remains positive. The National Association of Purchasing Managers Western Washington Index rose to 63.2 in April, its highest level since August 2008. The index has now been above 50 for the last nine months (values above 50 indicate expansion while values below 50 indicate

contraction). Boeing is likely to get the contract to build the U.S. Air Force's new tanker refueling aircraft. While Boeing is scheduled to trim its production of the 777 later this year to 5 per month from 7 per month, they now plan to restore the 7-per-month rate next year. They are also considering increasing 737 production in 2011 and 747 production in 2012. Production of the new 787 will also ramp up over the next few years.

- We have long been arguing that Washington's export orientation will benefit us as the global economy recovers. The European Union sovereign debt crisis is a potential threat to Washington export growth. The U.S. dollar is up 13% versus the Euro since the beginning of the year. Fortunately, the Eurozone comprises only 7% of Washington's non-transportation equipment export market ([see figure](#)). (Aircraft are ordered well in advance at negotiated prices so near-term aircraft exports are not affected.) Washington State is much more reliant on exports to emerging markets in Asia and elsewhere and the dollar is virtually unchanged versus emerging market currencies. Therefore, we do not see the EU debt crisis as a major threat to Washington unless it degenerates to the extent that it derails the global recovery.

The Eurozone crisis won't have a large impact on Washington exports

REVENUE COLLECTIONS

Overview

- For the first time since September 2008, Revenue Act receipts showed year-over-year growth after adjustment for legislative changes and non-economic factors. Adjusted receipts from the April 11, 2010 – May 10, 2010 collection period were 2.3% above their year-ago level. Seasonally adjusted Revenue Act collections have been trending upward since November 2009 ([see figure](#)).
- Major General Fund-State revenues for the April 11, 2010 – May 10, 2010 collection period were \$19.5 million (1.8%) lower than our February forecast. During the period, there was a total of \$3.6 million in large one-time payments and refunds that were not included in the forecast. Adjusted for these special factors, the forecast variance for the period is -\$15.8 million (-1.5%).

ECONOMIC & REVENUE UPDATE

Overview...continued

- A shift in the payment patterns of watercraft excise taxes (described below in "Other Revenue") is responsible for \$4.3 million of the shortfall. This revenue is now expected to be received over the next three months instead of in April.
- Combined with the shortfall from the last collection period, the cumulative variance for the February 11 - May 10, 2010 period is now -\$69.3 million (-2.6%). During this period, the forecast variance of expected large one-time payments and refunds combined with unexpected large payments and refunds summed to -\$19.1 million. Adjusted for these factors, the cumulative variance is -\$50.2 million (-1.8%).
- The revenues reported here conform to the new definition of General Fund-State as set forth in Engrossed Substitute Senate Bill 5073 (ESSB 5073), which was passed in the 2009 legislative session. Under the bill, the Health Services (HSA), Water Quality (WQA), Violence Reduction and Drug Enforcement (VRDE), Student Achievement (SAF), and Public Safety and Education (PSEA) Accounts have been consolidated into the General Fund-State effective July 1, 2009. The changes to reported revenues are as follows:
 - The B&O hospital tax, which formerly went to the HSA, has been added to total B&O (Revenue Act) taxes.
 - The tobacco products taxes that formerly went to the HSA and WQA

are added to total tobacco products (Revenue Act) taxes.

- Cigarette and Liquor taxes that formerly went to the HSA, WQA, and VRDE account are added to Department of Revenue cigarette and liquor (non-Revenue Act) taxes.
- Revenue that was formerly transferred from the state property tax levy to the SAF are retained in the property tax (non-Revenue Act).
- The syrup tax that formerly went to the VRDE account is added to "other" Department of Revenue non-Revenue Act taxes.
- Revenue that formerly went to the PSEA is reported under "Administrative Office of the Courts."

Revenue Act

- The revenue collections reported here are for the April 11 - May 10, 2010 collection period. Collections correspond primarily to economic activity in March 2010.
- Collections for this period are \$11.1 million (1.2%) below the February forecast.
- Two large one-time refunds totaling \$3.6 million, which were not included in the forecast, occurred during the collection period. Without these non-economic factors, the forecast variance would have been -\$7.5 million (-0.8%).
- The chart (below) showing year-over-year Revenue Act growth reflects the

ECONOMIC & REVENUE UPDATE

Revenue Act...continued

revenues added under ESSB 5073. By this measure, revenues increased 2.3% year-over-year in the current period after adjustments for large one-time payments and refunds, sharp improvement from the 4.0% adjusted decline in the previous period. Unadjusted for definitional changes and one time revenue, revenue increased 7.7% year-over-year as shown in the "Key Revenue Variables" table.

- Preliminary ERFC monthly estimates indicate retail sales tax collections are up 0.4% year-over-year and B&O taxes are up 6.5%.
- Preliminary tax payments from electronic filers who also paid in the April 11 – May 10 collection period of last year were up 5.9% year-over-year. This was the largest year-over-year increase since November 2007. Some details:
 - Payments in the retail trade sector were 13.5% year-over-year, the strongest growth since the electronic filers report began in November 2004. Payments in all twelve major retail trade sectors showed a year-over-year increase.
 - The largest increases in the retail trade sector were in gas stations and convenience stores (+21.1%), building materials and garden equipment (+20.7%), apparel and accessories (+18.3%), electronics and appliances (+17.7%), food and beverage stores (+17.7%) and motor vehicles and parts (+17.6%).
 - Payments in non-retail trade sectors were up 1.6% year-over-year.
 - Payments in the construction sector were down 19.0%, while those in the manufacturing sector were up 36.6% year-over-year due largely to the effects of the year-over-year increase oil prices on the gross receipts of petroleum refiners.
 - Excluding the construction sector, total payments were up 9.8% year-

over-year and payments from non-retail trade sectors were up 7.1%. Excluding both construction and manufacturing, payments from non-retail trade sectors were up 4.0%.

DOR Non-Revenue Act

- April collections were \$4.8 million (3.0%) below the February forecast.
- Most of the negative variance was due to an \$8.8 million (21.2%) shortfall in real estate excise taxes. The February forecast had real estate sales steadily increasing in the months leading up to the April 30th expiration date of Federal tax credits for certain homebuyers, but media accounts indicated that much of the activity was instead concentrated into deals signed in the month of April. Most of the excise tax from the April transactions will be collected in May and June when the deals close, which should reduce the shortfall.

April REET collections from March activity have yet to show bulk of tax credit-inspired rush

- April cigarette taxes came in \$759,000 (3.1%) below the February forecast, and liquor taxes were \$731,000 (4.5%) below.
- Property tax collections from the state school levy were \$4.1 million (6.1%) above the forecasted value.
- "Other" revenues came in \$1.4 million above the forecast due to lower-than-expected refunds of unclaimed property.

ECONOMIC & REVENUE UPDATE

DOR Non-Revenue Act...continued

- Due to the redefinition of GF-S revenue under ESSB 5073, April DOR non-Revenue Act collections are up 57.4% year-over-year. Without the changes, revenue would have been up approximately 10%, due mainly to the 32.2% year-over-year increase in real estate excise tax.

Other Revenue

- Preliminary April Department of Licensing receipts were \$4.3 million (80.5%) below the February forecast due to a change in the traditional pattern of watercraft excise tax payments. Historically, the Department sent out payment reminders in March and subsequently received a large volume of payments in April. Due to budget cutbacks, however, the Department did not send out payment reminders this year, resulting in a much lower volume of payments. As the annual tax is not due until June 30, much of the expected revenue (which totals approximately \$17 million per fiscal year) may now not arrive until the next fiscal year.
- April revenue from the Administrative Office of the Courts was \$708,000 (7.6%) above the forecast.
