## Window Hazards

LODD at this point last  
year:

55

(11 since last posting)

We are all aware that as the temperature goes up in the summer, more and more occupants are switching on their air conditioning. Many of these units are window mounted in trailers, homes, and office buildings. In August of 2005 two FF's were injured when a 70 lbs window unit fell on them. In May of 2006 a FF was knocked unconscious by a window mounted air conditioner that fell.

### Have you seen this?

This is a window mounted pellet stove. They mount in a similar fashion as the AC units do. You may not have seen them yet, but they are on the market, and with the state of the economy they may rapidly gain popularity. These units weights in at 150 lbs and are designed with a 30 lbs hopper.

**Be sure to your situational awareness looks in all directions!**

What in this picture is out of place and would be a huge clue for your primary search?

**Stay Safe!**
